

## **The Carl Ammerman LG Saddle**

All of these saddles are built in a small shop by hand, out of Herman Oak USA Saddle Leather and genuine woolskin. This keeps the quality consistent and offers years of use.

The Tree: The height and shape of the swell gives you a little something up front and the cantle height and dish provide a nice pocket without being restrictive, for a very well balanced seat.

We use a very close contact narrow centered ground seat and a advanced stirrup leather position with a hobble strap to help reduce rearward stirrup leather movement. This allows the rider to feel and cue the horse with ease and help maintain balance and position thorough the turns which contributes to a little more correctness completing the run.

The tree bar offers a very versatile fit for many horses. We have also added a little extra flare to the front of the bar for more relief in the scapula area which means more freedom and comfort for the horse. We can also offer custom fits for horses of challenging back conformations.
